ClinAnalytica

Design Better Clinical Trials

Trial Clintelligence / ClinAnalytica: AI-powered clinical trial intelligence platform that transforms how sponsors design, optimize, and execute trials using insights from 1,000,000+ historical studies.

1M+

HISTORICAL TRIALS ANALYZED

85%

RISK PREDICTION ACCURACY

$350K

AVG. SAVINGS PER TRIAL

THE PROBLEM

Clinical Trials Are Failing

Despite decades of experience, the industry keeps making the same mistakes

85%

Trials Delayed 30+ Days

Most trials miss their enrollment targets, leading to costly timeline extensions and budget overruns.

57%

Require Protocol Amendments

More than half of Phase 3 trials need amendments, each costing $500K+ and 90 days delay.

30%

Terminated Early

Nearly a third of trials terminate due to recruitment failures that could have been predicted.

20-30

Fragmented Tools Required

Sponsors juggle dozens of disconnected systems with no unified intelligence layer.

OUR SOLUTION

Intelligence Before Execution

ClinAnalytica helps sponsors design trials right the first time

🎯

Protocol Risk Scorer

AI analyzes draft protocols against historical patterns to predict amendment probability, enrollment delays, and termination risk before you start.

✓ Amendment probability scoring

✓ Enrollment delay prediction

✓ Actionable recommendations

🏥

Site Intelligence

Identify high-performing sites and investigators based on historical enrollment velocity, completion rates, and therapeutic area expertise.

✓ Site performance rankings

✓ Geographic optimization

✓ Capacity assessment

📊

Endpoint Benchmarking

Analyze which endpoints succeed or fail for your indication, with FDA precedent data and effect size benchmarks from similar trials.

✓ Success pattern analysis

✓ FDA precedent matching

✓ Sample size guidance

📈

Enrollment Forecasting

ML-powered projections of enrollment timelines with confidence intervals, monthly rates, and scenario modeling capabilities.

✓ Timeline projections

✓ Confidence intervals

✓ What-if scenarios

⚠️

Amendment Prevention

Predict and prevent costly protocol amendments by identifying high-risk eligibility criteria, endpoints, and operational complexity.

✓ Risk factor identification

✓ Criteria optimization

✓ Design comparison

🔍

Competitive Radar

Monitor competitor trials in real-time. Understand the competitive landscape before site selection and protocol finalization.

✓ Real-time monitoring

✓ Site saturation analysis

✓ Strategic alerts

HOW IT WORKS

From Protocol to Intelligence in Minutes

1

Upload Protocol

Upload draft protocol PDF or paste text. Our AI extracts all relevant details automatically.

2

AI Analysis

Advanced AI + ML models analyze against 1M+ trials to identify risks and opportunities.

3

Get Insights

Receive comprehensive dashboard with risk scores, recommendations, and benchmarks.

4

Optimize & Export

Run what-if scenarios, optimize design, and export reports for stakeholders.

TECHNOLOGY

Built for Scale & Accuracy

Enterprise-grade architecture powered by cutting-edge AI

🧠

Advanced LLM

State-of-the-art language models for protocol understanding and intelligent recommendations

📚

1M+ Trial Database

Comprehensive ClinicalTrials.gov data with semantic search and vector embeddings

🔮

ML Risk Models

Gradient Boosting & Random Forest trained on historical outcomes

🔗

REST API

FastAPI backend with 15+ endpoints for seamless integration

🎨

Modern Dashboard

🔐

Enterprise Security

Interactive 7-tab dashboard with rich visualizations

API key authentication, Docker deployment, data encryption

🌐

Multi-dimensional Matching

5-dimension trial similarity across condition, intervention, endpoints, population, design

📍

Geographic Intelligence

Site geocoding, distance calculations, regional regulatory insights

Seamless Integration with Jeeva

ClinAnalytica is built as an API-first platform, designed to integrate directly into Jeeva's clinical trial management workflow. Add intelligence to every stage of trial design.

- ✓ RESTful API with comprehensive documentation
- ✓ Webhook support for real-time alerts
- ✓ Single API call for full protocol analysis
- ✓ Batch processing for portfolio analysis
- ✓ White-label dashboard ready for embedding

```
// Analyze a protocol with one API call

POST /api/v1/protocol/analyze

{
  "protocol_text": "Phase 3, randomized...",
  "indication": "Non-Small Cell Lung Cancer",
  "phase": "Phase 3"
}
```

```
// Returns: risk_score, similar_trials,
// site_recommendations, enrollment_forecast,
// endpoint_benchmarks, competitive_landscape
```

ROI

Quantifiable Value

Based on industry benchmarks and historical trial data

$500K

Per Amendment Avoided

Direct cost savings plus 90-day delay prevention

$37K

Avg. Per Day Saved

Daily delay cost varies by therapeutic area

15-20%

Faster Enrollment

Through optimized site selection and eligibility

PLATFORM CAPABILITIES

Deep Dive: Core Modules

🎯 Protocol Risk Scoring

Our AI analyzes your draft protocol against patterns from 1M+ historical trials to predict issues before they happen. We identify specific risk factors in eligibility criteria, endpoints, operational complexity, and enrollment targets.

BONUS CAPABILITY

Patient Trial Matching

Help patients find eligible trials with AI-powered matching

🔍

Semantic Search

Patients search by condition in natural language. AI understands synonyms, related conditions, and medical terminology variations.

✅

Eligibility Matching

Auto-generated screening questions matched against trial criteria. Returns ranked results with match scores and explanations.

📍

Geographic Filtering

Find trials near patient location with distance calculations to nearest sites. Supports zip code,

📋

Detailed Matching

For each trial, shows criteria met/not met/unknown with clear explanations. Helps patients and recruiters understand fit.

city, and coordinate-based search.

DELIVERABLES

What You Get

Complete ownership and transparency

📦

Complete Source Code

Full access to all source code, including analysis engines, API, dashboard, and ML models

🔗

GitHub Repository

Private repository with full commit history, documentation, and deployment scripts

📚

Technical Documentation

Comprehensive API docs, architecture diagrams, and integration guides

🗄️

Database & Models

Pre-processed trial database, trained ML models, and vector embeddings

🐳

Docker Deployment

Production-ready Docker containers and deployment configurations

🤝

Knowledge Transfer

Technical walkthrough sessions and ongoing support during integration

Ready to Transform Trial Design?

Join the intelligence-first approach to clinical trials. Stop repeating history's mistakes.
