Prepared for Jeeva Clinical Trials

Clintelligence

AI-Powered Clinical Trial Intelligence Platform

"Transforming Protocol Design with Data-Driven Insights"

500K+	Real-time	AI
Trials Analyzed	CT.gov Sync	Powered by Claude

The Challenge

Clinical Trials Are Failing at Alarming Rates

40-50%

of trials under-enroll or require enrollment extensions

Carlisle et al. BMC Med Res Methodol, 2015; Fogel DB. Contemp Clin Trials, 2018

$350K-$1.5M

per substantial amendment (up to $5-8M in large Phase III)

Getz KA et al. Tufts CSDD, 2016; Moore TJ et al. J Clin Epidemiol, 2018

~80%

of trials undergo at least one protocol amendment

Getz KA et al. Tufts CSDD Impact Report, 2011; Ther Innov Regul Sci, 2016

6-18 months

median enrollment delay in underperforming trials

Bennette CS et al. Trials, 2016; Kitterman DR et al. Clin Trials, 2011

The Root Cause: Protocol design decisions made without comprehensive historical intelligence.

The Hidden Cost of Poor Protocol Design

A Single Trial Can Lose Millions to Preventable Issues

DIRECT AMENDMENT COSTS

IRB/EC Resubmission — **$75K+**
Per country, per amendment

Site Re-training — **$50K+**
Staff time, materials, travel

Document Updates — **$25K+**
ICF, CRF, monitoring plans

System Changes — **$100K+**
EDC, IVRS, database updates

TIME & OPPORTUNITY COSTS

Delay per Amendment — **2-4 months**
Implementation & approval time

Lost Revenue/Day — **$1-8M**
Delayed market entry (blockbuster)

Competitive Window — **Narrowed**
Rivals advance while you pause

Patent Life Erosion — **Months lost**
Every delay = less exclusivity

PATIENT & QUALITY IMPACT

Dropout Risk Increase — **5-20%**
Re-consent burden, confusion

Data Integrity Risk — **Elevated**
Protocol deviations increase

Site Fatigue — **Higher**
Reduced engagement & performance

Regulatory Scrutiny — **Increased**
Multiple amendments raise flags

Average Trial Impact

$800K - $3.5M+

With 2.3 avg amendments

Getz KA et al. Ther Innov Regul Sci, 2016

What if you could predict and prevent these issues BEFORE they happen?

Introducing Clintelligence

Your AI Co-Pilot for Protocol Optimization

🎯

Predict

Amendment risks before submission

📊

Benchmark

Design against successful trials

🔍

Identify

Enrollment bottlenecks early

💡

Recommend

Evidence-based optimizations

🏥

Accelerate

Site selection with proven performers

"Design smarter protocols. Run faster trials. Achieve better outcomes."

500K+

Trials in Database

ClinicalTrials.gov NIH Registry

50+

Attributes Analyzed

Real-time

CT.gov Sync

Platform Overview

Four Integrated Intelligence Modules

Overview

- Executive summary at a glance
- Key risk metrics
- Critical warnings
- Top recommendations

Competitive Landscape

- Similar trials analysis
- Sponsor track records
- Market intelligence
- Mechanism grouping

Protocol Design

- Eligibility optimization
- Endpoint intelligence
- Amendment risk prediction
- Sample size guidance

Operations

- Site intelligence
- Enrollment forecasting
- Risk matrix
- Timeline scenarios

How It Works

Simple 3-Step Process

1

Input Your Protocol

Upload your protocol synopsis or paste key details (condition, phase, endpoints, eligibility)

2

AI Analysis

Our engine matches against 500K+ trials, analyzes patterns, and generates insights

3

Actionable Intelligence

Receive comprehensive dashboard with recommendations, benchmarks, and predictions

Module Deep-Dive

Overview Dashboard - Executive Summary at a Glance

OVERALL RISK	AMENDMENT RISK	COMPLEXITY	SUCCESS RATE
54/100	68%	62	72%
Composite score	Probability	vs. benchmark	Similar trials

⚠ Critical Warnings

- **HIGH** Eligibility criteria stricter than 85% of similar trials
- **HIGH** Primary endpoint differs from FDA precedent

✓ Protocol Strengths

+ Sample size aligned with successful trials
+ Treatment duration within benchmark range
+ Standard-of-care comparator used

Module Deep-Dive

Competitive Landscape - Know Your Competition

Similar Trials Analysis

NCT04012345 87.5

Phase 3 JAK Inhibitor in RA

COMPLETED | Phase 3

NCT04567890 82.3

Phase 2 TNF-alpha in RA

RECRUITING | Phase 2

Top Sponsors in Similar Trials

1. AbbVie Inc.
   12 trials (78% completed)
2. Pfizer Inc.
   9 trials (82% completed)
3. Eli Lilly
   7 trials (71% completed)

Why It Matters: Understanding the competitive landscape helps avoid patient recruitment conflicts and learn from others' successes/failures.

Module Deep-Dive

Protocol Design - Optimize Every Element

Eligibility Analysis

Screen Failure Prediction

Your Ratio: **3.2:1**
Benchmark: **2.5:1**

Patient Pool Impact

-15% due to strict age criteria

Endpoint Intelligence

FDA Alignment

STRONG ACR50 is gold standard

Historical Success

72% of similar endpoints achieved approval

Amendment Risk

Risk Score **68/100**

Predicted amendments: 2.3

Top Risk Drivers

- Eligibility complexity (+18%)
- Visit schedule density (+12%)

Module Deep-Dive

Operations - Plan for Execution Success

Site Intelligence

45	12	18
Recommended Sites	Countries	Pts/Site Target

Top Performing Sites

Mayo Clinic, Rochester	8 trials
Johns Hopkins, Baltimore	6 trials

Enrollment Forecast

18 mo	24 mo	32 mo
Optimistic	Base Case	Conservative
25% prob	50% prob	25% prob

Key Bottleneck

Competing trials in same geography may slow recruitment by 3-6 months

The Technology Behind Clintelligence

Built for Accuracy and Scale

Data Foundation

500K+
Clinical trials indexed

Real-time
ClinicalTrials.gov sync

50+
Attributes per trial

AI/ML Engine

Claude AI
Natural language understanding

Multi-dimensional
Similarity scoring

Pattern Recognition
From historical outcomes

Security & Scale

Cloud-native
Fast, secure infrastructure

HIPAA-ready
Compliant data handling

API-first
Easy integration

Proven Value

Amendment Risk Prediction - Real Impact

✕ Without Clintelligence

Substantial Amendments	3
Total Delay	8 months
Additional Cost	$1.2M
Patient Dropout	+18%

✓ With Clintelligence

Amendments	1 (minor)
Timeline	On-time
Cost Savings	$1M+
Patient Retention	Target met

Case: Rheumatoid Arthritis Phase 3 - Amendment risks identified pre-submission, eligibility optimized upfront, endpoint aligned with FDA precedent

Proven Value

Site Selection - Find Sites That Actually Perform

Traditional Approach

- ✗ Rely on existing relationships
- ✗ Limited visibility into performance
- ✗ ~30% of sites enroll zero patients
- ✗ Guesswork on regional allocation

Getz KA et al. Am J Ther, 2014; Tufts CSDD

Clintelligence Approach

- ✓ Data-driven site recommendations
- ✓ Proven performers in YOUR therapeutic area
- ✓ Historical enrollment rates by site
- ✓ Regional optimization for global trials

Up to 40%

Faster site activation

Thiers FA et al. Nat Rev Drug Discov, 2008

20-30%

Higher enrollment rate per site

Getz KA & Campo RA. Clin Trials, 2017

Reduced

Zero-enrolling sites

Data-driven site selection studies

Proven Value

Enrollment Forecasting - Realistic Timelines, Better Planning

What You Get

Three-scenario Projections
Optimistic, Base, Conservative with probabilities

Sensitivity Analysis
Impact of key variables on timeline

Bottleneck Identification
Proactive mitigation strategies

Planning Benefits

More Accurate Budget Forecasting
Align financial planning with realistic timelines

Proactive Mitigation Planning
Address bottlenecks before they impact timeline

Stakeholder Confidence
Data-backed projections for board presentations

Improved	Earlier	Better
Enrollment predictions accuracy	Identification of potential delays	Resource allocation decisions

Integration & Workflow

Fits Into Your Existing Process

Standalone Web Platform

- No installation required
- Secure browser-based access
- Export reports to PDF
- Team collaboration features

API Integration

Coming Soon

- Connect to your CTMS
- Automated protocol analysis
- Real-time dashboard updates
- Custom webhooks

Data Security

- SOC 2 Type II compliant
- Encrypted data transmission
- No PHI/PII required
- HIPAA-ready infrastructure

Why Jeeva + Clintelligence

A Partnership That Makes Sense

For Jeeva's Clients

🎯 **Differentiated Service Offering**
AI-powered protocol optimization sets you apart

⚡ **Faster Trial Execution**
Fewer amendments, better enrollment outcomes

💰 **Cost Savings**
Reduced rework, delays, and budget overruns

For Jeeva's Operations

🏆 **Competitive Advantage**
Cutting-edge technology leadership

📈 **Efficiency Gains**
Faster protocol development cycles

🛡️ **Risk Reduction**
Data-backed decisions for better outcomes

Strategic Fit: Clintelligence enhances Jeeva's existing clinical trial expertise with scalable AI intelligence.

Thank You

"Better protocols. Faster trials. Smarter decisions."
